

ASPHALT / ROAD REPAIR

When potholes appear in the rail yard's parking lots or a walkway needs to be resurfaced, you need a qualified railroad contractor to ensure the security and safety of your normal operations are maintained.

Hulcher Services performs asphalt work, pothole repair and paving work for railroads and industry. Some of the tasks we perform as part of asphalt work include:

- Cut road's ballast to sub grade
- Grading
- Clean surface of loose materials
- Put down tack oil
- Lay and roll new asphalt
- Construct asphalt walkways and storage pads
- Dispose of old gravel, asphalt and other materials

Asphalt projects can be as simple as patching a pothole or as complicated as resurfacing a road or building a large storage area with pads and walkways. They are often performed in conjunction with railroad crossing construction or demolition.

Hulcher brings a level of railroad experience and professionalism to asphalt, paving and pothole repair tasks that no other contractor's personnel can match. Our crews have been background checked, trained and certified to work for all Class 1 railroads. As a railroad contractor, Hulcher is approved for operations within 25 feet of the track as well. These services may require the use of heavy equipment and Hulcher maintains a nationwide fleet.

Since 1963 railroads and industry have placed their confidence in Hulcher for a wide range of services. With locations in the United States, Canada and Mexico, Hulcher has qualified workers and the right equipment to perform your asphalt project as an independent service or within the context of larger projects.
