

FLOOD RESPONSE SERVICES

With all the heavy snowfall this winter, forecasters are expecting heavy flooding around the US in the coming months.

Hulcher Services can perform a variety of initial response services, including:

- Debris removal
- Track restoration
- Track panel installation and replacement
- Road construction
- Rock / debris hauling and removal
- Vacuum truck services
- Site remediation

Hulcher crews can respond within one hour of your call, any time day or night. Our 24/7/365 call center and strategically-positioned divisions ensure that we can respond to wherever you need us. For major flood response we can deploy equipment from around the country and even bring in relief crews if required.

Hulcher is ready to perform the necessary tasks after the initial response as well. For example, our undercutters and Air Spade® / vacuum truck combos can clean the mud and fouled ballast from tracks, switches and retarders.

Of course, prevention is the best option for flood control. Hulcher provides a variety of engineering and MOW services such as driftwood removal, culvert reconstruction, grade stabilization and drainage system construction to improve water flow and run-off and reduce the risk of flooding.

Now is the time to prepare. Call Hulcher today to learn more about all of our resources and services available in your specific location.
