

HAULING / TRANSPORTATION

Hulcher Services offers a full range of transportation services to our clients. These projects can be as simple as hauling water bottles to rail crews working in remote locations, or as complex as moving a massive, 170-ton industrial dredge to new location.

Transportation projects occur as independent tasks or within the context of other projects. For example,

- We can deliver a traction motor to the locomotive as part of a remote traction motor change project.
- Sidebooms return barges to the water and grapple trucks deliver generators, during a disaster response.
- Following derailments we deliver track panels to the site, haul damaged rail cars off for disposal and transport salvaged freight to other locations.*
- We transport product collected during load reduction jobs for disposal or to another vehicle.*
- Virtually every demolition, switch installation or environmental remediation project involves hauling old materials for proper disposal.*

Hulcher's crews have been background checked, trained and certified to work for all Class 1 railroads. Being a railroad contractor, Hulcher is approved for operations within 25 feet of the track as well. Hulcher brings a level of experience, railroad professionalism and the right qualifications to transportation projects that no other contractor's personnel can match.

Call 800-637-5471 today to learn more about Hulcher's hauling and transportation services.

* Analysis, containment, treatment, transport, and disposal of material are each conducted in full compliance with relevant federal and applicable state laws/regulations (licensing, permitting, procedural and operational protocol) which sometimes requires the participation of fellow contractors engaged by the customer and/or Hulcher subcontractors.
