

SPRING DRAINAGE

This winter has been tough and your track has been subjected to icing, mud fouling and all the hardships that the weather can deliver. It's hard to believe but spring is coming soon, and now is the time to schedule your drainage projects.

Hulcher Services is now reserving all the specialized equipment you need to support all your drainage projects in the spring.

- Our air excavation service features the Air Spade® / vacuum truck combo. This service removes mud from track, switches, crossings, bridge approaches and material-impacted retarders quickly and effectively.
- Larger projects call for our "off track" undercutters, which cut out fouled ballast, impacted mud and other debris from beneath your track. Hulcher can provide the necessary equipment.
- Spring is also the right time for ballast raking, and Hulcher's patent-pending Dozer Rake is perfect for smoothing ballast from beneath your tracks. Hulcher's dozers stand ready to grade larger stretches of terrain.
- Our excavators and dump trucks can remove trees and other materials that have filled your ditches, bridge piers and culverts after winter "thaw" and "spring" rains.

Now is the time to program the equipment you'll need for your spring projects. Call Hulcher today.
