

TRANSLOAD SERVICES

Hulcher Services provides many different types of transfer services, including Transloading, or the transfer of product or commodity from rail car to truck, rail car to rail car or truck to truck.

Hulcher has decades of experience performing transloads for the railroads, grain companies, trucking / intermodal businesses and general industry. We transload virtually any kind of commodity including bulk grain, feed, fertilizers, chemicals, paper, lumber, steel, pipe, finished goods and auto parts. These transloads are often done during normal railroad or business operations, or they can be performed as part of larger derailment clean-up projects.

Hulcher's employees are experts when it comes to transferring product to/from railcars, semi trailers, trucks, grain bins and product storage facilities. Trained and certified to work for all Class I railroads, they respond quickly and professionally to any transload project to complete the work effectively and safely.

For your transload project to be successful, you need quality equipment, maintained to be reliable and operated by experienced professionals. For more information about how Hulcher can meet your load transfer and transload needs, call Hulcher at 800-637-5471.

* Analysis, containment, treatment, transport, and disposal of material are each conducted in full compliance with relevant federal and applicable state laws/regulations (licensing, permitting, procedural and operational protocol) which sometimes requires the participation of fellow contractors engaged by the customer and/or Hulcher subcontractors.
