

TRACK PANEL

For more than 40 years, Hulcher Services has removed and installed track panel for Class 1 and short line railroads.

Hulcher performs track panel removal and installation as part of scheduled maintenance-of-way work, in response to natural disasters such as flooding or as a follow-up to derailments.

As a total services railroad contractor, Hulcher's integrated services capabilities allow us to provide a turnkey solution for maintaining the right-of-way or responding to emergency situations. We can perform the entire process ourselves, from delivering the panels to bucking the ballast after the installation is complete.

Hulcher maintains a fleet of excavators and sidebooms around the U.S., Canada and Mexico along with a roster of trained operators, to remove and install track panel.

Hulcher also offers the exciting new Panel Boss®, which provides an alternative method for moving and installing track panel quickly, safely and cost-effectively.
