

# ENVIRONMENTAL REMEDIATION

Hulcher Services' environmental professionals have the training and experience to handle a wide range of remediation and other environmental projects.

Our crews have performed non-emergency site remediation in rail yards, along the right-of-way and in industrial settings. Hulcher can serve as a lead, or we can assist your crews in a support role.

Hulcher's equipment operators and laborers are located at 38 divisions around the U.S., Canada and Mexico, with technical oversight from dedicated environmental professionals stationed at four locations.

Many companies offer environmental services, but few are qualified to work in a railroad environment. Hulcher's operators rank among the most experienced railroad professionals in the industry. They have received training in railroad applications, are current in safety and security certification requirements for all Class 1 railroads, and have spent years perfecting their craft in MOW environments.

Our environmental professionals have decades of environmental AND railroad experience and are experts you can trust to deliver quality leadership on your remediation projects.

For years you've trusted Hulcher for engineering services and derailment response. Now you know that you can leverage Hulcher's decades of railroad experience and tradition of quality for your next remediation project as well. **Call Hulcher today to learn more about our site remediation and other environmental services.**
